Departure

~~Sat~~ Sat: Punta Suarez & Kicker rock

Duration

4 Days

AM: Pitt Point Pitt Point, located on San Cristobal Island's northeastern tip, is home to frigatebirds, storm petrels, and all three

types of boobies: Nazca, blue-footed, and red-footed. A steep trail leads visitors up a

cliff and through a ravine to an area teeming with birds. This location is also

excellent for snorkeling and scuba diving.

PM: Witch hill & Kicker rock Located on the

northern coast, witch hill and its surroundings present one of the most

picturesque beaches in the Galapagos with its white powdery sand and the abundance

of animals. Wildlife includes sea turtles, rays, and various types of booby birds. The

clear water provides an excellent

opportunity for enjoying swimming and

snorkeling. Kicker rock formation is located

about two hours west of San Cristobal. The

rocks protrude from the water and stand

vertically hundreds of feet above the ocean,

separated by a small channel. Although

there are no landing areas, visitors can see

a variety of marine life through

circumnavigation and dinghy rides.

### DAY 3: Punta Suarez & Gardner Bay

AM: Punta Suarez Blue-footed boobies, albatrosses, and Nazca boobies can all be

found in this area. The large waved albatrosses use the cliff as a launching pad,

making it a beautiful location on the ocean front. The magnificent blowhole, which

shoots water high into the air, is the most

well-known attraction. This location offers

fantastic photo opportunities. PM: Gardner

Bay Gardner Bay, on the eastern side of the

island, is the breeding site of nearly all of

the world's 12,000 pairs of waved

albatrosses. It has a large white sandy

beach with a plethora of sea lions, making it

ideal for relaxing. Because of its rocky

shores, this location is ideal for diving and

snorkeling.
